

Q&A Small-scale projects

online | 21.02.2022

21/27

Agenda

- Cornerstones of Small-Scale Projects
Nuno Madeira, Alpine Space Joint Secretariat
- Motivational Talk: Circular Economy
Sonja Eser, Sinnenwandel, Circular Economy Consulting, Germany
- Motivational Talk: Climate Change
Wolfgang Lexer, Umweltbundesamt, Environment Agency Austria
- Practical/technical elements of small-scale reminded at a glance & next steps
Nuno Madeira, Alpine Space Joint Secretariat

AMBITION & CORNERSTONES OF SMALL SCALE PROJECTS

1st round Q&A

Priorities and specific objectives

Source: Interreg Programme, Terms of Reference

Small-scale projects

- Make greater use of synergies and complementarities
- Reach out to newcomers who are eager to take part in transnational cooperation
- Address innovative subjects through:
 - Set the scene projects that are rather new to transnational cooperation
 - Capitalisation actions to „roll-out“ available tools and solutions and promote the up-take for greater impact

Main features

Focus

- Set the scene projects or capitalisation actions to roll-out available tools and solutions

Partnership

- From 3 to 6 partners from at least 3 countries
- Newcomers are encouraged to take part as partners

Duration

- From 12 to 18 months

Total budget

- From €250k to €750k

Source: Interreg Programme, Terms of Reference

Illustrative examples

- Bridge the innovation gap between urban and rural areas through incentives
 - Help SMEs adopt digital technologies in rural areas
- Foster the transfer, exploitation and mainstreaming of knowledge and results developed ARPAF projects to help design public policies
 - Facilitate the implementation and monitoring of governance models for forest management

EXPERT INPUT N°1

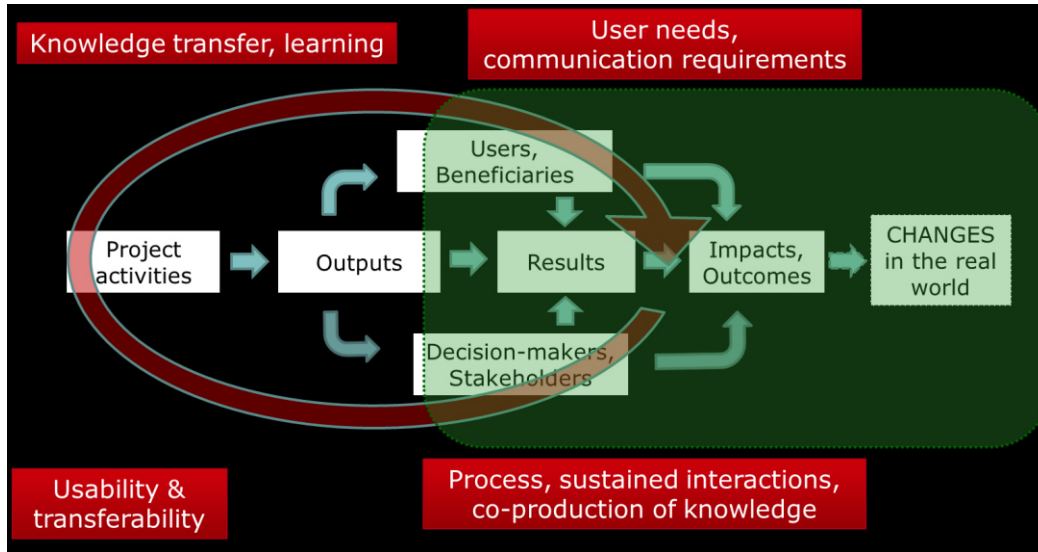

Sonja Eser, Sinnenswandel, Circular Economy Consulting

EXPERT INPUT N°2

Wolfgang Lexer, Environment Agency Austria

! **Outputs** → **Use** → **Results Change** ?

The 'knowledge producer - user divide'

Small-scale projects: 'Roll-out' in the field of climate resilience – some ideas and illustrative examples

What notions does the concept of ,roll-out‘ carry?

→ Capitalisation / Transfer / Diffusion / Uptake / Upscaling / Spin-off / Follow-up / Application / Implementation / ...

Bridging the gaps ...

from **Knowledge** *to* **Use**
from **Outputs** *to* **Impacts, outcomes, results**

What could ‘roll-out’ of existing knowledge, results, recommendations or tools require?

- Reviewing and optimizing usability, transferability, applicability to target groups
- New target groups ‘beyond the bubble’; new types of partners
- Customizing, concretizing, adjusting to different contexts
- Demonstrations, showcasing, advertising, marketing, incentivizing
- Ownership, governance structures, process organisation, monitoring + learning mechanisms
- Interactions with target groups, stakeholder dialogue, learning and exchange formats, educational offers, capacity building measures, creating new or making use of existing networks
- Business models, securing resources, long-term financing
- Institutionalisation: agreements, commitments, resolutions; integration in policy frameworks, institutional agendas, funding schemes

NATURAL HAZARDS & CLIMATE CHANGE PREPAREDNESS CHECK FOR MUNICIPALITIES

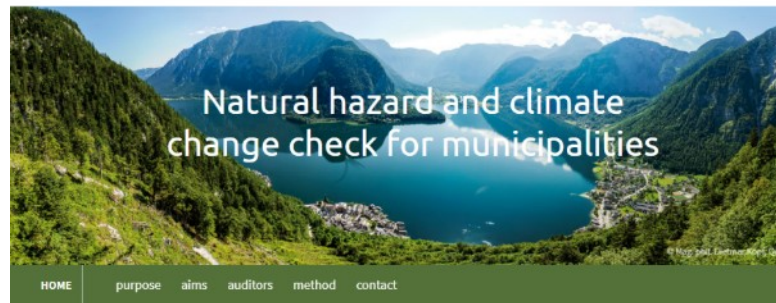

Voluntary risk preparedness counselling tool and audit procedure

- Transfer to other countries/regions
- Evaluating Austrian application experiences
- Demonstration/exhibition checks
- Testing, customizing & adjusting to different context conditions
- Steering group, coordination mechanism, aligning with existing structures + processes
- Organising implementation process, quality control, business model, resources (staff, incentivizing)
- Training of auditors, peer-to-peer networks, exchange and learning (domestic, transnational)
- Advertising, incentivising (municipalities)

CAPA – CLIMATE ADAPTATION PLATFORM FOR THE ALPS

Transalpine knowledge portal: developed by C3-Alps project, re-launched & advanced under umbrella of EUSALP AG8, user-based content enhancement, active & running

- Content enhancement, further deployment, extensions (e.g. climate services, sector + sub-thematic modules)
- Positioning as cross-sectoral knowledge brokerage tool, embedded in knowledge transfer offensive for mainstreaming adaptation into sectors
- Addressing new sectoral target groups, involving them as active content contributors, more active user involvement
- Cross-portal harvesting, interoperability
- Cooperation with new projects, networking with other portal providers and knowledge producers
- Evaluation of user behaviour, preferences & needs
- Dissemination, visibility, marketing, stimulating demand
- Securing long-term financing

Physical interactive natural hazard models

© Baselt 2021

www.alpine-region.eu/Study-physical-natural-hazard-models-Finalreport

Study by EUSALP AG8 with new prototype plus construction & assembly plan

- ➔ Duplication of prototype in other countries/regions
- ➔ Developing new models for different hazards, risk situations and target groups, based on key messages and didactic recommendations of the study
- ➔ Embedding in risk communication and education campaigns addressing new audiences (e.g. youth)
- ➔ Touring exhibition, cooperation with schools, integration in curricula

White Paper ‚Forest Fires in the Alps‘

www.alpine-region.eu/results/forest-fires-alps-state-knowledge-and-further-challenges

Policy recommendations for integrated fire management by EUSALP AG8

- ➔ Implementing recommendations: integrated forest fire management plans at territorial levels
- ➔ Transnational network for knowledge transfer & exchange; regional multi-stakeholder roundtables (authorities, action forces, researchers)
- ➔ Joint trainings of specialized action forces, making joint use of infrastructure
- ➔ Forest fire database and monitoring system with regional case studies across Alpine territories

ALPINE CLIMATE ACTION PLAN 2.0

Implementation pathways for Alpine Climate Target System 2050 in 10 sectors: Small-scale projects could tackle specific pathways or implementation steps

- Pathways consist of a sequence of measures/steps that build on previous achievements and follow a roll-out model
- Initial steps are often focussed ‘capitalisation exercises’: stock-taking, evaluating, gap analysis of existing resources (knowledge, practices, tools, products, recommendations)
- Establishing networks (e.g. of regional coordinators), capacity-building activities, demonstration & pilot projects, etc.
- Forming durable alliances and implementation partnerships that take ownership for further implementation

Illustrative examples

Tourism packages for climate-neutral tourism:

- Review of existing offers, services and approaches
- Practical testing and piloting for selected destinations
- Control system (carbon footprint), promotion

Alpine-wide risk management plan for cross-border risks:

- Overview of existing approaches and gap analysis
- Mapping hazard hot spots
- Common framework for risk management of cross-border risks

Support measures to enhance individual risk precaution:

- Compiling Alpine toolbox from existing tools (teaching materials, local planning, adaptation options at household level, etc.)
- Capacity-building programme (teachers, educators, etc.)
- Road show with risk experience

‘SETTING THE SCENE’: ONE EXAMPLE...

Involving the private sector in financing and implementing adaptation and promoting use of innovative and green financing instruments by local authorities

Rationale: Low levels of private actors involvement in adaptation + lack of financing as most common barrier to local adaptation => need for combining different funding sources in smart and complementary ways

Solutions: Green/sustainable finance instruments blending public and private sources are available, but are still niche innovations

land value capture
social impacts bonds
green bonds
property development levies
resilience bonds
impact-investment funds
tax increment financing
climate bonds
results-based climate financing
revolving climate funds
tax/fee abatement schemes
carbon pricing
crowdfunding

How? – Some ideas to get started

- Need to involve and bring together private actors (businesses, banks, insurances, investors, households) *and* local authorities (political leaders, expert staff)
- Need for new project partners: (green) finance experts
- Possible elements, activities, formats:
 - Involving policy diffusion experts
 - Preparing and brokering usable information materials and good examples, information campaign
 - Knowledge alliances, advisory board (finance experts, private sector representatives, local authorities, adaptation and governance experts)
 - Formats for peer-to-peer learning: mentoring, counseling, twinning experienced and non-experienced cities, ...
 - On-site visits in progressed cities
 - Pilot / demonstration projects
 - (...)

ASP, Q&A Small-Scale Projects

Online, 21st February 2022

PRACTICAL INFORMATION & TAKEAWAYS

WP1 Roll-out tools

Activities carried out by partners with target groups

Tangible product(s) delivered as a result of one or more activities

Slim structure:

- One project specific objective
- One work package
- 1 to 3 outputs
- No need to have WPs on communication and management

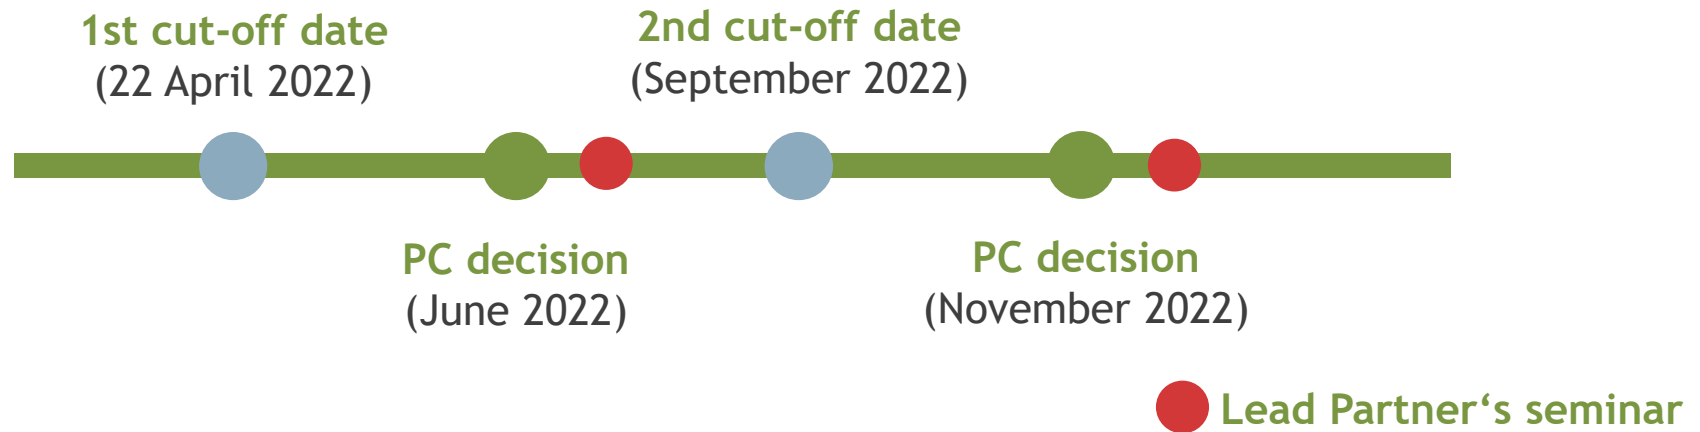

Simplification procedures

Cost categories	Option b)		Option c)	
	Real costs	Flat rate	Real costs	Flat rate
(1) Staff		20% of (4) and (5)	Fixed percentage	
(2) Office and administration		15% of (1)		40% of (1)
(3) Travel and accommodation		10% of (1)		40% of (1)
(4) External expertise	Real costs			40% of (1)
(5) Equipment	Real costs			40% of (1)

Takeaways

- Consider that small-scale projects follow a one-step procedure

- Submit your proposal via JEMS
 - Tutorial and guidance will be published in March
- Get in touch with your ACP for project development support, including partner search
- Watch our previous Q&A sessions whose recordings are available under www.alpine-space.eu
